Hispanic Personal Finances:
Financial Literacy and Decision-making
Among College-Educated Hispanics

Annamaria Lusardi, GFLEC
Carlo de Bassa Scheresberg, GFLEC
Paul Yakoboski, TIAA-CREF Institute
State-by-State Survey: Online survey of more than 25,000 respondents (roughly 500 per state + DC)

- First wave collected in 2009.
- Survey offers unique information on Americans’ financial capability
- The sample size is sufficiently large to allow for an analysis of the personal finances of highly educated Hispanics

Data from the 2015 wave will be available in summer 2016
Our Report

1. Provides an overview of Hispanic personal finances
2. Looks at assets and liabilities
3. Examine measures of financial distress
4. Examines levels of financial literacy
5. Examine the effects of financial literacy on financial distress
Characteristics of the Sample

The sample is composed of respondents who described their ethnicity as Hispanic and who reported at least some college education.

Our total sample contains 1,553 observations.

Demographic characteristics of the sample:

- Majority female (55%) and young (80% are age 50 or younger)
- 35% of the sample has a college degree and an additional 14% hold a postgraduate degree
- 58% are self-employed or employed full-time, while another 10% are employed part-time, and 9% are unemployed, disabled, sick, or otherwise unable to work
- 55% are married, 35% are single
- 51% have financially dependent children
These are high rates when compared to asset ownership in the total Hispanic population.
However, these rates are still significantly below those of college-educated Whites.
Retirement Accounts

- Have at least a retirement account: 60%
- Have at least a self-directed retirement account: 45%
- Regularly contribute to a retirement account (conditional on having a RA): 78%
Long-term Debt Liabilities

- Combining the different measures of long-term debt into a single indicator provides a better understanding of overall indebtedness.
- 73 percent of college-educated Hispanics have at least one source of long-term debt and 35 percent have at least two.
- Troublingly, all forms of debt are more prevalent among Hispanics than among Whites.
Managing debt presents a challenge for many college-educated Hispanics.

Whites show fewer signs of financial distress: they are less likely to be late with mortgage payments and less concerned about paying off their student loans.

Note: The statistics in the figure are conditional, respectively, on having a student loan or having a mortgage.
Expensive Credit Card Behavior among Cardholders

- 78% of college-educated Hispanics have at least a credit card
- Many use credit cards expensively

Credit Card Behavior

- In some months, I paid the minimum payment only: 42%
- In some months, I was charged a late fee for late payment: 19%
- In some months, I was charged an over the limit fee for exceeding my credit line: 11%
- In some months, I used the cards for a cash advance: 15%
- Expensive credit card behavior: 50%

Note: The statistics in the figure are conditional on having a credit card.

- Overall, half of college-educated Hispanics who have credit cards report having engaged in some form of expensive credit card behavior – a proportion much higher than is observed among college-educated White cardholders, of whom only 34% have engaged in such behaviors.
Use of Alternative Financial Services

Use of AFS in the 5 years prior to the survey

- Used a pawn shop: 22%
- Taken a short term ‘payday’ loan: 17%
- Taken an auto title loan: 11%
- Used a rent-to-own store: 11%
- Gotten an advance on a tax refund: 10%
- Used one or more high-cost borrowing methods: 35%

- In addition, nearly a quarter of those with retirement accounts indicated they had withdrawn from the accounts, taking either loans or hardship withdrawals.
Debt Perception: Having Too Much Debt

<table>
<thead>

<td>16%</td>
</tr>
</tbody>
</table>

Note: Percentages were calculated over a full sample of 1,553 Hispanic observations and 12,033 Whites. Percentages do not add to 100% because of the exclusion of “Don’t know” and “Prefer not to say” responses.
Financial fragility: “How confident are you that you could come up with $2,000 if an unexpected need arose within the next month?”

- 39% of college-educated Hispanics either probably or certainly cannot come up with $2,000 in a month in case of emergency

Note: Percentages do not add up to 100% because “don’t know” and “prefer not to say” answers are excluded.
Perceptions of Financial Knowledge

More than three fourths of college-educated Hispanics rated themselves as having high levels of financial knowledge.

- 76% rated their overall financial knowledge as high (5-7).
- 14% rated it as neutral (4).
- 7% rated it as low (1-3).

How would you rate your overall financial knowledge?
Financial Literacy

Despite high self-assessments of financial knowledge, only 12% answered all five financial literacy questions correctly and only 32% answered the first three questions correctly.

Not only is the percentage of correct answers low, but many respondents responded that they did not know the answers—an indicator which is associated with low financial knowledge.

Answered the first three questions correctly | 32% — | 52% — |
Answered all questions correctly            | 12% — | 25% — |
Main Insights From Regression Analysis

We report the main results of multivariate analysis of two variables: indebtedness and financial fragility.

1. Income shocks are important factors associated with indebtedness and financial fragility. Respondents who experienced an income shock in the 12 months prior to the survey are 18pp more likely to struggle financially and 18pp less likely to be able to come up with $2,000 in one month.

2. Only a few demographic variables are associated with the likelihood of being highly indebted. The likelihood decreases with age and it increases for those who have two or more dependent children. On the other hand, financial fragility is significantly negatively correlated with age and education.

3. Financial fragility is associated with low financial literacy. College-educated Hispanics who correctly answered all three financial literacy questions are six percentage points less likely to be financially fragile.
Two Key Implications

1. **Programs that increase the financial literacy of this population can do much help to improve their financial condition.**
   - Low levels of financial literacy correlate with financial distress and financial vulnerability. Those with lower financial literacy are also less likely to seek financial advice. Notably, lower levels of financial literacy are linked to a failure to engage in retirement planning.

2. **Addressing the use of high cost short-term credit and borrowing would also improve the financial condition of college-educated Hispanics.**
   - Hispanics with access to traditional financial institutions still turn to high-cost borrowing methods, despite the availability of alternatives. Finding a way to increase college-educated Hispanics’ engagement with traditional financial institutions would decrease these expensive behaviors and benefit this population.
