## Executive summary

The financial well-being of African Americans lags that of the U.S. population as a whole, and whites in particular. The reasons for this gap are complex, but one area of importance in addressing it is increased financial literacy.

Financial literacy is knowledge and understanding that enable sound financial decision making and effective management of personal finances. As such, improved financial literacy contributes to improved financial well-being. This report uses the third wave of the *TIAA Institute-GFLEC Personal Finance Index (P-Fin Index)* to examine the state of financial literacy among African American adults and the relationship between financial literacy and financial wellness. Key findings include:

- Personal finance knowledge among African American adults lags that of whites. On average, African Americans answered 38% of the *P-Fin Index* questions correctly, with only 28% answering over one-half of index questions correctly. The analogous figures among whites were 55% and 62%, respectively.
- Financial literacy varies across demographic groups within the African American population. The observed patterns are consistent with variations identified in the U.S. population as a whole—financial literacy is greater among men, older individuals, those with more formal education, and those with higher incomes.
- Insuring is the functional area where personal finance knowledge is lowest among African Americans, but it is also essentially just as low in the areas of comprehending risk, investing and identifying go-to information sources.
- Borrowing and debt management is the area of highest personal finance knowledge among African Americans.

Any opinions expressed herein are those of the authors, and do not necessarily represent the views of TIAA, the TIAA Institute or any other organization with which the authors are affiliated.

- There is a strong link between financial literacy and financial wellness among African Americans. Those who are more financially literate are more likely to plan and save for retirement, to have non-retirement savings and to better manage their debt; they are also less likely to be financially fragile.

A more refined understanding of financial literacy among African Americans—their level of overall financial knowledge, areas of strength and weakness, and variations among subgroups—can inform initiatives to improve financial well-being. While not a cure-all, increased financial literacy can lead to improved financial capability and practices that benefit even those with relatively low incomes.

## Introduction

The financial situation of African Americans lags that of the U.S. population as a whole and of whites in particular. Simple economic indicators illustrate the gap. While 66% of African Americans report that they are doing at least OK financially, the comparable figure among whites is 78%.<sup>1</sup> Median household income among African Americans was \$35,400 in 2016; median household income of whites was \$61,200. African American household net worth was \$17,600 in 2016 and 19% had zero or negative net worth; the analogous figures for white households were \$171,000 and 9%, respectively.<sup>2</sup>

The gap is evident in more nuanced indicators, as well. According to the *2018 National Financial Capability Study* (NFCS)<sup>3</sup> :

- Forty-two percent of African Americans who were employed full time engaged in additional work for pay; the comparable figure among whites was 28%.

- African Americans are more likely than whites to feel that they currently have too much debt (45% and 35%, respectively).
- African Americans are less likely than whites to be homeowners (42% and 66%, respectively). Among homeowners, African Americans are more likely to have been late with a mortgage payment in the past year (46% compared with 14%).
- African Americans are more likely than whites to carry student loan debt (41% and 21%, respectively). Among those with student loan debt, African Americans are more likely to have been late with a payment in the past year (59% compared with 35%).
- Among credit card holders, 68% of African Americans engage in expensive credit card behaviors compared with 36% of whites. Such behavior includes paying only the minimum due, incurring late payment fees, incurring over-limit fees, and taking cash advances.

This report uses data from the third wave of the *TIAA Institute-GFLEC Personal Finance Index (P-Fin Index)* to examine the current state of financial literacy among African American adults and the link between financial literacy and financial wellness. Financial literacy is knowledge and understanding that enable sound financial decision making and effective management of personal finances. As such, greater financial literacy contributes to greater financial well-being.

The *P-Fin Index* is unique in its capacity to examine financial literacy across eight areas of personal finance in which individuals routinely function, in addition to providing a robust indicator of overall personal finance knowledge and understanding.<sup>4</sup> The online survey is fielded each January with a sample of U.S. adults; the 2019 sample consisted of 1,008 individuals.<sup>5</sup> At the

<sup>1</sup> See Board of Governors of the Federal Reserve System (2019).

<sup>2</sup> See Board of Governors of the Federal Reserve System (2017).

<sup>3</sup> See FINRA Investor Education Foundation (2019).

<sup>4</sup> See Yakoboski, Lusardi and Hasler (2019) for a full discussion of the *P-Fin Index* and 2019 findings for the U.S. adult population.

<sup>5</sup> The sample was drawn from Ipsos' *KnowledgePanel*, which is a large-scale probability-based online panel. The sample was weighted by gender, age, race and ethnicity, census region, metropolitan status, education level, household income, and language proficiency to be nationally representative of U.S. adults, ages 18 and older.

same time, the survey is also fielded with a separate oversample of a particular demographic group to enable detailed analysis of that group; 1,015 African American adults were oversampled in 2019.<sup>6,7</sup> Previous oversamples were Hispanics in 2017 and millennials in 2018.

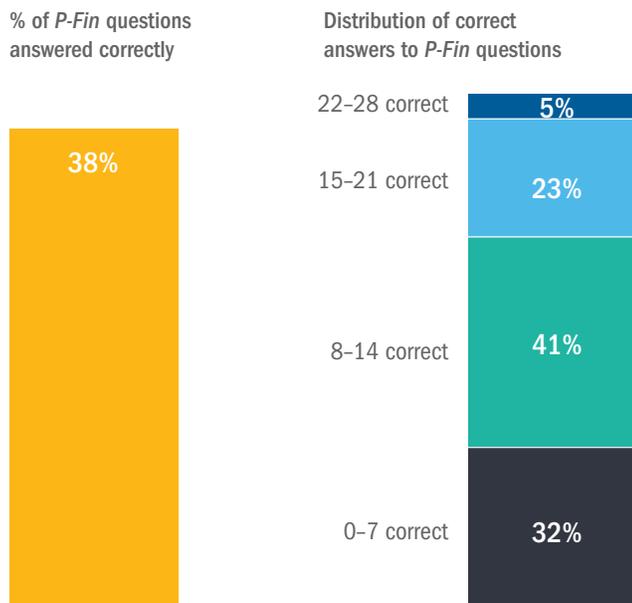

## African American financial literacy

Financial literacy is low among many U.S. adults, including African Americans. On average, African American adults answered 38% of the *P-Fin Index* questions correctly. Only 28% answered over one-half of index questions correctly, with 5% answering over 75% correctly (Figure 1).

Personal finance knowledge among African Americans tends to be lower than that of whites. On average, white adults answered 55% of the *P-Fin Index* questions correctly (Figure 2). Sixty-two percent of whites answered over one-half of the index questions correctly, with 22% answering over 75% correctly (Figure 3). One-third of African Americans demonstrated a relatively low level of financial literacy, i.e., they answered 25% or less of the index questions correctly, compared with 16% of whites.

**Figure 1. 2019 *P-Fin Index***

African American adults answered 38% of *P-Fin Index* questions correctly, on average.

Source: TIAA Institute-GFLEC Personal Finance Index (2019).

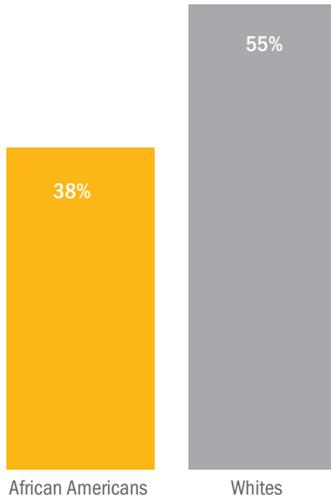

<sup>6</sup> There is no overlap between members of the general population sample and the oversample; the 120 African Americans in the general population sample were not included among the 1,015 members of the African American oversample.

<sup>7</sup> The African American oversample too was weighted by gender, age, census region, metropolitan status, education level and household income to be nationally representative.

## Demographic variations among African Americans

Financial literacy varies across demographic groups among African Americans (Figure 4). Observed variations in the average percentage of *P-Fin Index* questions answered correctly are consistent with those identified among the U.S. adult population as a whole.<sup>8</sup>

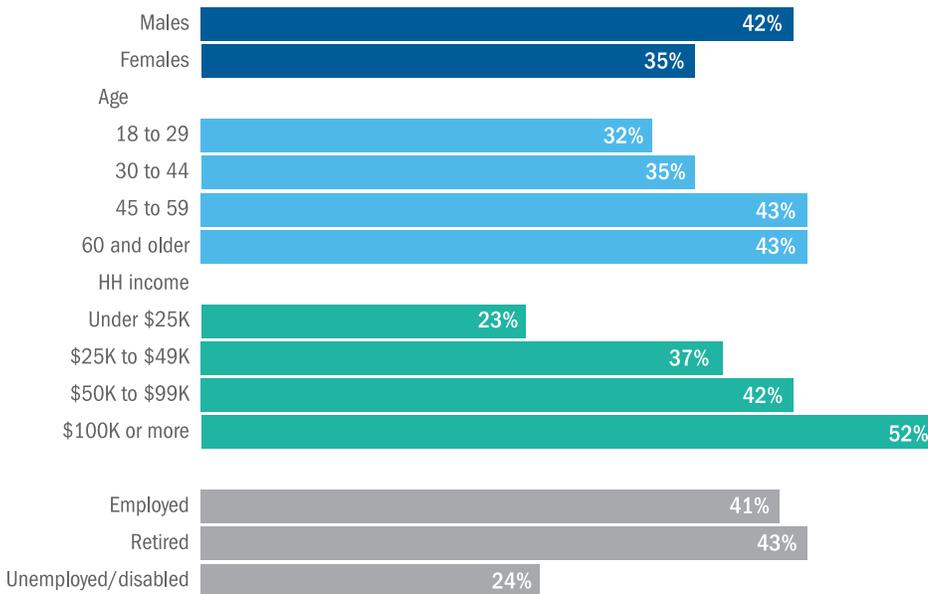

- Financial literacy is significantly higher among men. There is a seven percentage point difference between African American men and women in the percentage of index questions answered correctly.
- Personal finance knowledge tends to increase with age. One-third of index questions are answered correctly on average among African Americans under

age 45, compared to 43% among those ages 45 and older.

- Personal finance knowledge tends to be greater among those with higher household incomes. There is a 29 percentage point difference in *P-Fin Index* questions answered correctly between African Americans with household incomes below \$25,000 and those with household incomes of \$100,000 or more.
- Financial literacy varies with employment status. In particular, unemployed or disabled<sup>9</sup> African Americans have markedly less personal finance knowledge than those employed<sup>10</sup> and those retired.

**Figure 4. 2019 *P-Fin Index***

% of *P-Fin* questions answered correctly among African Americans

<sup>8</sup> See Yakoboski, Lusardi and Hasler (2019).

<sup>9</sup> Includes those unemployed or on temporary layoff, as well as those disabled and unable to work.

<sup>10</sup> Includes those employed full time, part time and self-employed.

In the U.S. adult population, financial literacy tends to be greater among those with more education and those who have received financial education.<sup>11</sup> The same holds among African Americans (Figure 5).

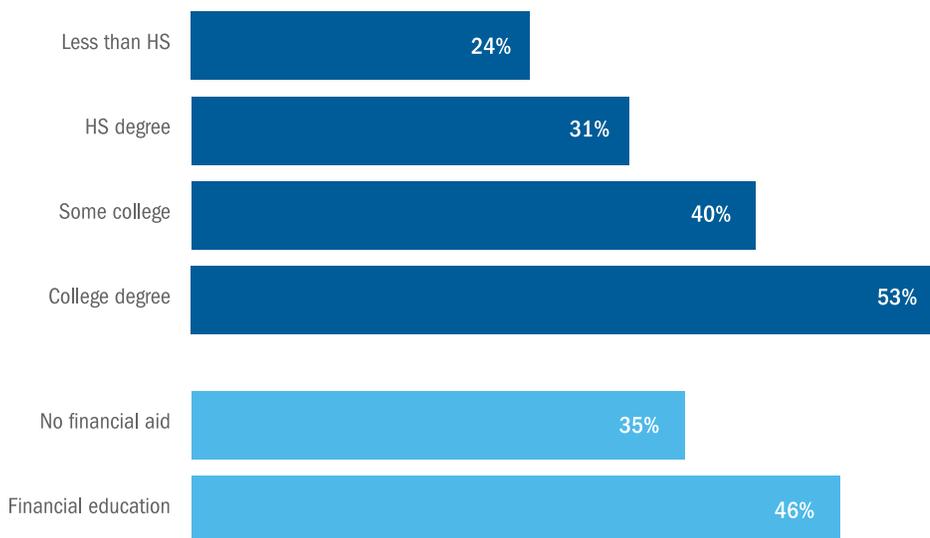

- College-educated African Americans answered 53% of the *P-Fin Index* questions correctly on average, compared with 24% among those with less than a high school degree.

- There is an 11 percentage point difference in the percentage of index questions answered correctly between African Americans who have participated in a financial education class or program and those who have not done so.<sup>12</sup>

<sup>11</sup> See Yakoboski, Lusardi and Hasler (2019).

<sup>12</sup> See Lusardi and Mitchell (2014) for a discussion of existing research regarding the relationship between financial education programs and financial literacy levels, as well as the challenges inherent in empirically establishing causality and effectiveness.

## Personal finance functional knowledge

The *P-Fin Index* gauges personal finance knowledge and understanding in eight functional areas<sup>13</sup>:

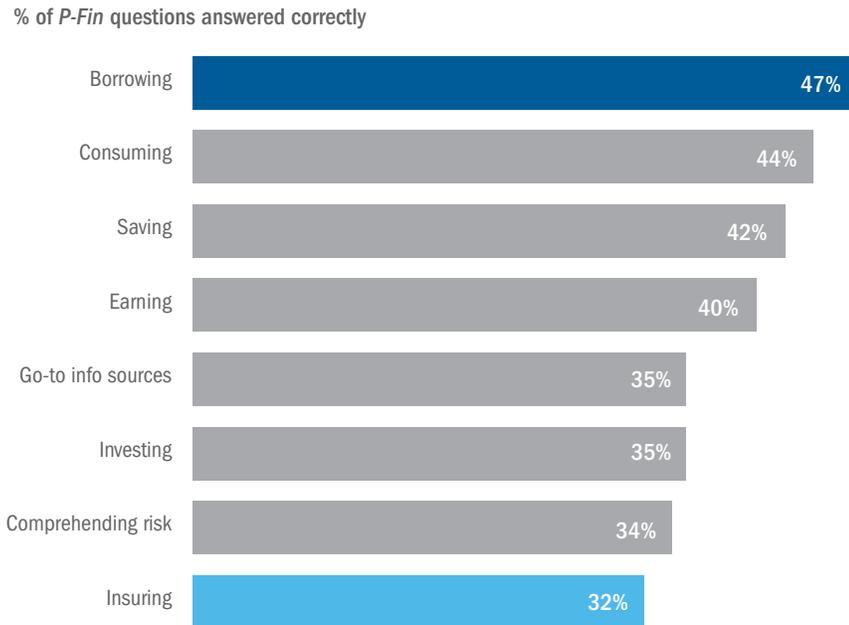

1. Earning—determinants of wages and take-home pay.
2. Consuming—budgets and managing spending.
3. Saving—factors that maximize accumulations.
4. Investing—investment types, risk and return.
5. Borrowing and managing debt—relationship between loan features and repayments.
6. Insuring—types of coverage and how insurance works.

7. Comprehending risk and uncertainty—understanding uncertain financial outcomes.
8. Go-to information sources—recognizing appropriate sources and advice.

In each functional area, African Americans answered less than one-half of the index questions correctly (Figure 6). Beyond that, financial literacy is particularly low in some areas. Insuring is where African American financial literacy tends to be lowest, with 32% of questions answered correctly on average. Comprehending risk, investing and go-to information sources are areas where functional knowledge is essentially just as low.

### Figure 6. Functional knowledge

Borrowing is where African American financial literacy is highest; insuring is where it is lowest.

Source: TIAA Institute-GFLEC *Personal Finance Index* (2019).

<sup>13</sup> These areas correspond to the National Standards for Financial Literacy outlined by the Council for Economic Education. See <http://councilforeconed.org/resource/national-standards-for-financial-literacy/>.

Low financial literacy in the areas of insuring and comprehending risk is particularly troubling—risk and uncertainty are inherent in financial decision making, and individuals face a range of choices regarding events to insure and how to structure their coverage. Understanding how insurance works (e.g., the trade-off between deductibles and premiums) and what constitutes appropriate coverage is important. Poor insurance decisions can leave an individual underinsured for some risks and overinsured for others, as well as overpaying for coverage. Sobering, the percentage of correct answers in the area of insuring tends to be even lower among African American women (29%), the young (25% among 18- to 29-year-olds), and the unemployed and disabled (18%).

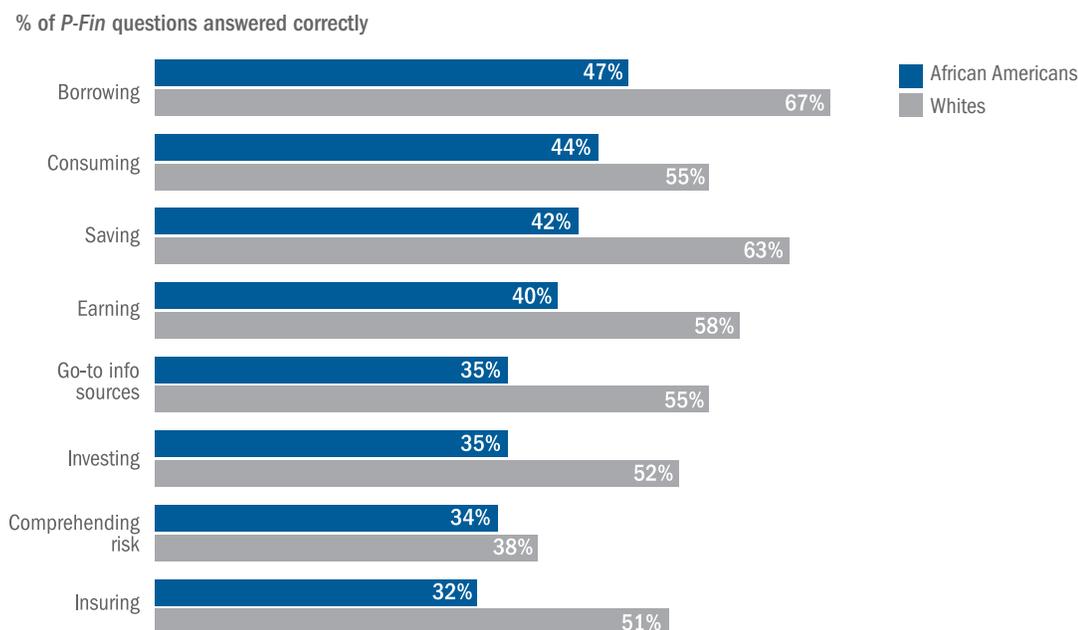

with 47% of index questions answered correctly on average. This is also the area of greatest knowledge among all U.S. adults. Borrowing and managing debt often begin relatively early in life. Knowledge and understanding, in turn, can emerge from experience tracing back to relatively young ages.

Differences in functional knowledge between African Americans and whites are striking (Figure 7). The percentage of *P-Fin Index* questions answered correctly is lower among African Americans in each functional area except comprehending risk and uncertainty, where the 4 percentage point difference is not statistically significant. All other functional areas have double-digit differences ranging from 11 to 21 percentage points.

Borrowing and debt management is the area of greatest personal finance knowledge among African Americans,

## Financial wellness

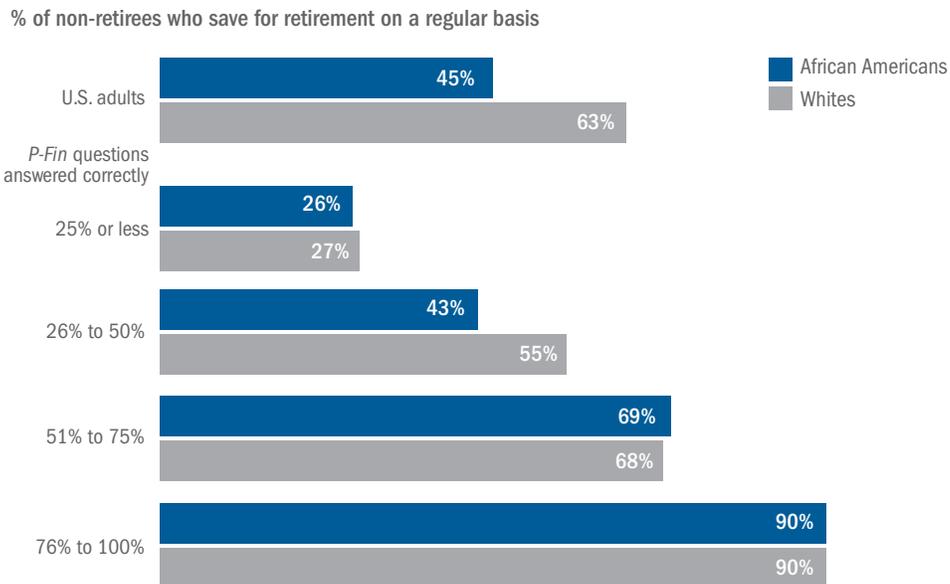

The 2019 *P-Fin Index* survey contained several questions indicative of financial wellness—questions regarding behaviors that should promote financial wellness or regarding outcomes that demonstrate financial wellness. Our previous research found a strong link between *P-Fin Index* scores and these indicators of financial wellness.<sup>14</sup> This finding holds among African Americans, as well—those with greater financial literacy tend to exhibit greater financial well-being. In addition, consistent with other

research discussed above, African Americans tend to exhibit lower financial well-being than whites do. In some instances, however, greater financial literacy mitigates such differences in financial wellness. The following dimensions of financial wellness were examined:

- Saving and planning for retirement (Figures 8 and 9).
- Non-retirement savings (Figure 10).
- Debt constraint (Figure 11).
- Capacity to handle a financial shock (Figure 12).

### Figure 8. Financial wellness

## Discussion

Financial wellness depends in part on how well individuals navigate the myriad of financial decisions faced in the normal course of life. Financial literacy is knowledge and understanding that enable sound financial decision making and effective management of personal finances. As such, financial literacy contributes to financial well-being.

Unfortunately, financial literacy among U.S. adults is modest at best. Financial literacy among African Americans is even lower. Furthermore, African American financial literacy is lower than that of whites in all but one functional knowledge area. African American financial literacy tends to be lowest in the areas of insuring, comprehending risk and uncertainty, investing, and go-to information sources.

A more refined understanding of financial literacy among African Americans, including areas of strength and weakness and variations among subgroups, can

inform initiatives to improve financial well-being. While not a cure-all, increased financial literacy can lead to improved financial capability and practices that benefit even those with relatively low incomes. There is a strong link between financial literacy and financial wellness among African Americans. Those who are more financially literate are more likely to plan and save for retirement, to have non-retirement savings and to better manage their debt; they are also less likely to be financially fragile.

Given the financial literacy gap between African Americans and whites and the variations among African Americans described in this report, it is important for initiatives to better target the needs of specific demographic subgroups. This includes increasing efforts to promote financial education in school and the workplace. It is also important to provide programs that emphasize topics where financial literacy is particularly low, such as insuring and understanding risk and uncertainty.

## About the authors

**Paul Yakoboski** is a senior economist with the TIAA Institute, where he is responsible for research on lifetime financial security, including topics related to defined contribution plan design, individual saving and investing, financial literacy and capability, and asset management during retirement, as well as research on workforce issues in the higher education and nonprofit sectors. Prior to joining the TIAA Institute, Yakoboski held positions with the American Council of Life Insurers, the Employee Benefit Research Institute and the U.S. Government Accountability Office. Yakoboski earned his B.S. in economics from Virginia Tech and M.A. and Ph.D. in economics from the University of Rochester.

**Annamaria Lusardi** is the Denit Trust Chair of Economics and Accountancy at the George Washington University School of Business. She previously taught at Dartmouth College, Princeton University, the University of Chicago Harris School of Public Policy and Booth School of Business, and Columbia Business School. She also was a visiting scholar at Harvard Business School. Dr. Lusardi has won numerous research awards. The more recent ones include the 2018 Ketchum Prize from the FINRA Investor Education Foundation, the 2018 Oscar and Shoshana Trachtenberg Prize for Faculty Scholarship, the 2017 Skandia Research Award on Long-Term Savings, and the 2013 William E. Odom Visionary Leadership Award from the Jump\$tart Coalition for Personal Financial Literacy. In 2018, she received an honorary degree of Doctor of Science (Economics and Business Administration) from the University of Vaasa in Finland. She earned her B.A. from Bocconi University in Milan and Ph.D. from Princeton University. Dr. Lusardi is a TIAA Institute Fellow.

**Andrea Hasler** is an Assistant Research Professor in Financial Literacy at GFLEC. She leads the team of researchers working on financial literacy and capability, and develops analyses for educational and policy initiatives. Hasler has recently worked on projects focused on financial literacy levels of the young, women, entrepreneurs, investors, and minorities in the United States and around the world. She holds a Ph.D. in finance as well as an M.Sc. and B.A. in business and economics from the University of Basel. During her doctorate, she spent two years at the New York University Stern School of Business conducting research on household saving and financial decision making. She also has been a lecturer at the University of Basel for six years. Her professional experience includes the development of an online advanced studies course in financial market theory and work as an analyst conducting global equity market research.
